SECTION A

Reading Skills *20 marks*

1. Read the following passage carefully : *10*

(1) With the growing focus on sustainable living, the importance of kitchen gardens in urban regions has garnered greater acknowledgement. One significance of kitchen gardens in urban areas is their role in promoting food security. Rapid urbanization has led to increased distances between food production centres and urban settlements, resulting in longer food supply chains and a decrease in the freshness and nutritional value of food.

(2) By having a kitchen garden, urban dwellers can grow their own fresh produce at home, making good use of empty tins, old utensils, and clay flower pots, ensuring a constant supply of nutritious food for themselves and their families. This activity not only saves money and time but can also provide a healthy, practical, and environmentally friendly hobby for the whole family.

(3) Not only do kitchen gardens contribute to food security, but they also play a crucial role in environmental sustainability. Traditional agricultural practices often involve the use of synthetic fertilizers, pesticides, and intensive irrigation methods, which may have adverse effects on the environment. However, kitchen gardens promote organic farming, reducing the use of harmful chemicals and preserving soil health.

Official CBSE question paper from cbse.gov.in | futuretopper.in

(4) In addition to fostering a sustainable environment, kitchen gardens provide numerous health benefits to urban dwellers. The availability of fresh and organic produce from the garden ensures a higher intake of essential nutrients, vitamins, and minerals, promoting better overall health and well-being.

(5) Furthermore, kitchen gardens have proven to be an effective tool for education and community development. They provide an opportunity for individuals to reconnect with nature and learn about the basics of agriculture. Besides providing fruits and vegetables, gardening provides an aesthetic and therapeutic exercise that helps relieve stress. The physical activity involved in tending to a garden helps individuals stay active, reducing the risk of obesity and related health issues.

(6) By involving children in gardening activities, they can develop an appreciation for the environment and learn essential life skills. Moreover, kitchen gardens can also serve as a platform for community engagement, fostering social interactions and promoting a sense of belonging among urban residents.

(7) Despite the numerous benefits of kitchen gardens, establishing and maintaining one in urban areas can be challenging. Limited space, lack of sunlight, and soil quality issues are common obstacles that urban gardeners face. However, innovative solutions such as vertical gardening, hydroponics, and rooftop gardens have emerged to overcome these challenges.

2. Read the following passage carefully : *10*

(1) Silk is a natural protein fibre, some forms of which can be woven into textiles. Silk has a long history in India. It is known as *Resham* in eastern and northern India, and *Pattu* in the southern parts of India. India is the second largest producer of silk in the world after China.

Official CBSE question paper from cbse.gov.in | futuretopper.in

(2) Silk is renowned for its luxurious qualities with a natural soft and smooth texture that feels comfortable on the skin. One of its unique qualities is to absorb and release moisture, regulating the body temperature, and keeping the wearer cool and dry.

(3) Silk is one of the strongest natural fibres, but it loses up to 20% of its strength when wet. Its elasticity is moderate to poor: if elongated even a small amount, it remains stretched. It can be weakened if exposed to too much sunlight. It may also be attacked by insects, especially if left dirty.

(4) The process of silk production is known as sericulture. Silk is produced by several insects; but, generally, only the silk of moth caterpillars has been used for textile manufacturing. To produce 1 kg of silk, 104 kg of mulberry leaves must be eaten by 3000 silkworms.

(5) So what makes silk so costly ? Firstly, cultivation of silk is a labour-intensive work. Secondly, the silk fabric is carefully derived from the larva of the silkworms which spin silk threads around themselves to make cocoons from natural sources. This makes the production limited due to factors like — climate, availability of quality mulberry leaves and time required by silkworms to complete their lifecycle. Thirdly, the intensive work can only be carried out with specialized knowledge and expertise by skilled artisans and craftsmanship. Lastly, superior quality silk fabrics are made from long and uniform silk fibres giving them a smooth and lustrous appearance. Thus, production requires careful selection, adding to the cost.

Official CBSE question paper from cbse.gov.in | futuretopper.in

In 2021, Karnataka was the highest producer of raw silk at 8483 metric tonnes followed by Andhra Pradesh at 5520 metric tonnes with Assam close behind at 5038 metric tonnes. At the other end of the spectrum there was Chhattisgarh (248 metric tonnes), Nagaland (230 metric tonnes) and UP trailed behind at 179 metric tonnes.

Answer the following questions, based on the above passage :

(i) Silk is a popular fabric in India.

Support the above statement in 40 words with evidence from the text. *2*

(ii) Select the option that is true for the assertion and reason given below. *1*

Assertion : Silk feels comfortable to the skin.

Reason : It made of natural protein fibre.

(A) Both the assertion and the reason are true, and the reason is the correct explanation of the assertion.

(B) Both the assertion and the reason are true, but the reason is ***not*** the correct explanation of the assertion.

(C) The assertion is true, but the reason is false.

(D) The assertion is false, but the reason is true.
