1. Read the following passage carefully : *10*

(1) The words probiotics, prebiotics, and postbiotics may sound like variations of the same thing, but what a difference a prefix makes. The first is a category of health-promoting microbes. The latter two groups are types of beneficial molecules. But all three biotics are critical for supporting the community of microscopic organisms that live in the gastrointestinal tract, known as the gut microbiome. With both beneficial and harmful bacteria living in the human body, these diet-related factors — the biotics — help tip the balance in the positive direction. It is important to understand their differences, as you'll see, because each of these factors serves a distinct purpose, even as they work together.

(2) Despite their importance for the gut microbiome, the health benefits of these 'biotics', which are present in certain foods or result from their metabolism, extend beyond the digestive tract. A growing body of scientific evidence has linked prebiotics, probiotics, and postbiotics, with improvements in metabolic diseases — including obesity and cholesterol abnormalities — depressive symptoms and poor sleep quality, among many other conditions.

(3) Besides promoting general gut health, consuming food rich in probiotics can improve irritable bowel syndrome and antibiotic-related diarrhea, prevent traveller's diarrhea, produce vitamins and increase nutrient absorption, and decrease the risk of common infections. In fact, when consumed regularly, probiotics have been found to reduce the occurrence of upper respiratory tract infections (like the common cold).

(4) Many different types of beneficial bacteria are considered probiotics. The most common ones include *Lactobacillus* and *Bifidobacterium,* of which there are dozens of strains. "You have to match what it is you're concerned about with the probiotic you should use," says Gregor Reid. Many different types of beneficial bacteria are considered probiotics.

(5) Some foods, such as yogurt, kefir, kimchee, and fermented soybeans and kombucha naturally contain probiotics. But here's where things get complicated: not all fermented foods or yogurts contain probiotics, Reid says. As a consumer, a good starting point is to look for the phrase "contains live and active cultures" on the label; it's even better if specific strains of bacteria are listed, because then you'll know you're getting the right stuff.

(6) Simply put, prebiotics are sources of food for those beneficial microbes — the probiotics. They are typically a form of carbohydrate or fiber that we don't have the enzymes to digest. As a result, they move through the digestive tract to the intestine, where beneficial bacteria (probiotics) can feast on them.

(7) When you consume foods that are rich in probiotics and prebiotics, the microbes in your gut consume the undigestible prebiotic fiber and produce bioactive compounds called postbiotics. They are ultimately the endgame that we want — they affect how our gut operates and keeps the good bacteria there and the bad bacteria out.

Answer the following questions, based on the above passage :

(i) Which of the following statements best describes the author's attitude towards probiotics ? *1*

2. Read the following passage carefully : *10*

(1) After more than two years of halted travel, India's tourism and hospitality industry is now cautiously hopeful. Tourism constituted almost 3% of India's GDP and generated around 100 million jobs in 2019. But the sector was severely hit in India — like in other countries — in the past two years.

(2) Indians are now travelling with a vengeance — 'revenge travel', as the phenomenon is called. And many, experts say, now prefer to travel within the country instead of flying to more expensive destinations abroad. The industry is also benefitting from new trends borne of the pandemic such as micro-holidays and workcations.

(3) According to a survey, 51 percent of Indian travellers believed that international travel remained an important means of expanding their horizons and connecting with other cultures. Over two years, the survey said, Indian travellers are now dreaming about their next international trip and more than 70 percent of Indians are excited about being able to travel internationally.

(4) There has also been an increase in the number of students going abroad to study. The increasing desire to study overseas is credited to the pent-up demand from the pandemic's two-year duration. This has got further pronounced because of growing aspirations and affordability among the middle-class students from Tier II and Tier III cities.
